The Overview of the Technology :

As a spin off technology of MeitY sponsored project, C-MET has designed and developed an emergency lamp using supercapacitors. The salient features of the quickly rechargeable emergency lamp are

- It can charge in less than 2 minutes
- It can give power continuously upto 0.5-1 hour
- It can also charge from renewable energy sources
- Ideal for rural India where there is no regular power supply.
- The lamp is very handy, light weight and can be sold at affordable price.

C-MET has filed an Indian patent application (No. 265/DEL/2015) for this technology

Quickly rechargeable emergency lamp

The level of technology readiness at C-MET

The technology readiness level is 5

Period of training under the agreement

C-MET will provide one week training on the development of Emergency lamp at the premises of C-MET and making of 5 numbers of emergency lamps will be demonstrated.

Technology Transfer Fee

Rs. 0.93 lakhs + Applicable taxes

The ToT package contains the following

1. Document containing Design and Circuit diagram
2. Fabrication details
3. Product specification
4. Test plan and procedure
5. Training
