Title: Process for Nano-ZnO powder

Brief Description and Product/Solution

Nano Zinc oxide has great potential in electronics, cosmetics, catalysis, rubber industries, etc.
C-MET has established facility for semi-pilot production of nano ZnO. Nano ZnO thus synthesized were found to exhibit enhanced deep- desulpharisation adsorbant property for purification of petroleum when compared to that using commercially available ZnO powders.

The pilot plant set up at C-MET has a batch capacity upto ~5kg/day of nano zinc oxide powders. Enhanced catalyst performance was observed with *Nano* ZnO.

Indian patent application (No. 2348/DEL/2015) has been filed

Main uses and domain
Petroleum industry: Catalyst for deep desulphurisation applications
Consumer products: Cosmetics. Sun screen lotion, etc
Electronics : Varistors
Rubber industry : Activator for vulcanization

Features and Technical Specifications

Average particle size of Nano ZnO powder :~ 30 nm.
Loss on Ignition (@ 540 ºC) : ~ 3 %
Sulphur pick up : ~ 26 mg/gm
