10. Domain: Healthcare Technologies

Sr. No.	Parameters	Brief details
1.	**Brief details of Technology Developed**	Mercury™ Telehealth Suite is an enterprise-grade 5G & cloud-enabled comprehensive EMR / EHR, eICU, and Telemedicine solution.
	Name of the Project under which technology is developed	Development of Telemedicine Technology
	Funding Agency	MeitY
	Technology Readiness Level (TRL)	TRL 9
	Brief Write-up on the Technology Developed	Mercury™ Telehealth suite is highly available, scalable, standard-compliant, and secure with a user-friendly interface to carry out day-to-day clinical record keeping, tele-consultation, and remote monitoring operations. Coupled with cloud infrastructure, Mercury™ solution offers a low-cost, highly maintainable solution for healthcare-deprived citizens of the nation dwelling in remote areas. Mercury™ suite can be used in telemedicine scenarios like patient-to-doctor, doctor with multiple clinics, groups of clinicians, clinicians with specialist end, and hospital-to-hospital interaction.
	Details of Contact Person alongwith Mobile No. and e-mail ID	Shailendra Singh Narwariya, C-DAC Pune shailendras@cdac.in 9823248495
2.	**Brief details of Technology Developed**	Aakanksha Radiation treatment planning system is an indigenous radiation therapy planning system for use in HDR Brachytherapy machines.
	Name of the Project under which technology is developed	Design and Development of Indigenous Radiation Treatment planning system for Telecobalt and HDR Brachytherapy Machines
	Funding Agency	Department of Atomic Energy Through Tata Memorial Centre Mumbai
	Technology Readiness Level (TRL)	TRL-9
	Brief Write-up on the Technology Developed	Aakanksha Radiation Treatment Planning System (TPS) is a state-of-the-art suite of applications to aid oncologists and radiation physicists in preparing an accurate and optimized radiation plan for HDR Brachytherapy using customizable machine and source modeling, standard-compliant treatment output, data file support, robust 3D visualization, and dosage simulation. The system provides features preparing faster and accurate end-to-end planning of the treatment. The system is capable of planning using different types of applicators, such as Fletcher Suite, MUPIT, ring, Vienna, CVS, and Venecia applicators. The system is deployable and usable over free and open-source platforms.
	Details of Contact Person alongwith Mobile No. and e-mail ID	Dr. R. Rajamenakshi, C-DAC Pune menakshi@cdac.in 9881716125
3.	**Brief details of Technology Developed**	An intelligent, autonomous, non-contact vital screening solution named "Nireekshak" has been developed. It is capable of measuring 5 vitals e.g. Heart Rate, Respiration Rate, Blood Pressure, SPO2 and Temperature of a

Sr. No.	Parameters	Brief details
		person in non-contact manner using camera by employing advanced signal processing techniques along with machine learning.
	Name of the Project under which technology is developed	Internal Funding
	Funding Agency	C-DAC Chennai
	Technology Readiness Level (TRL)	TRL-5
	Brief Write-up on the Technology Developed	Nireekshak is an intelligent, autonomous, non-contact vital monitoring system capable of real-time estimation of Heart Rate, Respiratory Rate, SpO_2, Body Temperature, and Blood Pressure, aimed at enabling rapid and reliable health screening in dynamic, high-density public environments. Unlike conventional systems focused only on fever detection, Nireekshak brings together machine inteligence, remote photoplethysmography(rPPG), and thermal imaging to analyse multiple vital signs simultaneously. Its real-time processing capabilities make it suitable for deployment in dynamic, high-volume environments without compromising accuracy or speed.
